

Dr. Aimé J. Messiga

Dr. Messiga has a BSc in Agronomy from Dschang University (Cameroon), an MSc in Soil Science from Ghent University (Belgium), and a PhD in Soils and Environment from Laval University (Canada). He did two post-doctoral studies at Quebec Research and Development Centre and Trent University, and worked as a research agronomist at Centre de Recherche sur les Grains (CEROM) in Quebec. Since May 2016, he works as a Research Scientist for Agriculture and AgriFood Canada (AAFC) at Agassiz Research and development Centre. He is a nutrient management specialist. His primary research goals during the past six years focused on (1) improving phosphorus management in silage/grass, (2) improving nitrogen management in blueberries, and (3) developing high performance growing medium by partially substituting peat and coir with organic amendments to support vertical agriculture.
