March 26 [4-6 pm]

Koerner Library [Rm. 216]

When academic and research institutions generate information, they have a responsibility to share and communicate their findings with a broader audience in order to benefit as a whole. How is knowledge being implemented in different communities and what technologies are being used to communicate with each other? How can the academic community integrate with the wider community? The **Research Commons** invites **grad students** from every discipline to discuss:

- involving the public in setting research agendas
- knowledge translation
- community members as active collaborators in research
- patient-conducted research in health care
- exploring social media for knowledge sharing
- OpenScience, etc.: making publicly-funded research freely available
- What is a creator's accountability to the source of their inspiration?

Practice communicating your research as we blur the boundary between the academic and wider community. **Join us** for our March FIREtalk, **Community and Communication**. Register at: <http://bit.ly/CommunityCommunication> or just stop by the FIREtalk!

FIREtalks: An interdisciplinary forum for graduate students, by graduate students.
